

PrintApex Dashboard Walkthrough

PrintApex - what each section of the dashboard is for

Fleet Status:	Real-time view of every printer on the floor: who is online, who is offline, current ink and media levels, and the live job queue.
Live Fleet Score:	One rolled-up 0-100 health score for the whole fleet, derived from open incidents, consumables state, and seven-day uptime.
Printers index:	Searchable list of every printer with status badges, last-seen timestamps, and quick links to each printer detail page.
Printer detail:	Per-printer drill-down: full job history, consumables usage, maintenance log, and defect events captured on that machine.
Work Orders:	Open and queued jobs across the floor, with throughput, owner, and the stage each job is in right now.
Alerts:	Real-time notifications from the printers themselves, ordered for the floor team, with a one-click action queue.
Defect Detection:	Computer-vision catches banding, color shift, misregistration, and smear at the edge, with a recommended fix per event.
Insights and Reports:	Long-form articles on waste reduction, downtime avoided, and ROI trends, written from the live numbers across your fleet.

This handout is the static companion to the live dashboard. It is intended for clients and prospects after a demo so they have a printable reference for what each section covers and which questions it answers.
